1 Overview

Maven Site Indexer plugin

An easy way to index your maven site and give it a nice ajax search box.

It's as easy as:

1. adding the plugin to your `pom.xml` [usage instructions](#) - of course it should already have the `site` plugin configured
2. calling `mvn site`
3. opening up your site and enjoying your nice and hassle-free search box!

2 Usage instructions

Adding the plugin to your POM

The Maven Site Indexer is a standard maven plugin and can be added in the following way to your pom.xml.

```
<plugin>
  <groupId>org.uniknow.maven.plugins</groupId>
  <artifactId>index</artifactId>
  <version>${index.version}</version>
  <executions>
    <execution>
      <phase>post-site</phase>
      <goals>
        <goal>index</goal>
      </goals>
    </execution>
  </executions>
</plugin>
```
